B. Background Information

Anchored in the 2030 Agenda for the Sustainable Development Goals (SDGs) and committed to the principles of universality, equality and leaving no one behind, the UNDP has issued the UNDP Strategic Plan 2018-2021 as guideline to help countries achieve SDGs by focusing UNDP's competence and expertise on three sets of development settings:

1. Eradicate poverty in all its forms and dimensions.
2. Accelerate structural transformation for sustainable development by addressing inequalities, transitioning to zero-carbon development & building a more inclusive accountable governance system.
3. Build resilience to shocks and crises.

In alignment with the UNDP Strategic Plan to reduce inequality, the acceleration of access to electricity using locally available renewable resources is a feasible intervention. Notably, because there are about 2,000 villages in Indonesia without sustainable access to power, and there are 17,000 islands in Indonesia that makes national grid interconnection is costly. The Government of Indonesia has been addressing this challenge by allocating state-owned budgets for rural electrification programme. With current fiscal capacity, meeting the

target of national electrification with quality of service remains a big challenge.

UNDP, with funding support from KOICA Indonesia, implements a 4-year project titled "Accelerating Clean Energy Access to Reduce Inequality (ACCESS)." Under overall oversight from UNDP Indonesia, the project will be implemented in Indonesia. The Ministry of Energy and Mineral Resources (MEMR) and KOICA Indonesia are the implementing partners of the ACCESS project in Indonesia.

The ACCESS project's objective is for the poor and most vulnerable communities to have equitable and sustainable access to basic services required for improving livelihoods. In Indonesia, the ACCESS project locations are 23 villages in East Nusa Tenggara, West Sulawesi, Southeast Sulawesi and Central Kalimantan Provinces, where the total of 1.2 Mega Watts of off-grid solar-PV power plants will be constructed.

Context of this TOR

The ACCESS project will establish and build the business management capacity of the existing or potential institution in the project location to serve as a Renewable Energy Service Enterprise/Company (RESCO). RESCO will consist of technical operators and management board, whose skills is critical for the sustainability of the renewable energy infrastructure operation and thus its benefit. Good management capacity of RESCO board will ensure consistent contribution for electricity service collected from communities and stimulate productive economic activities by using the electricity. For the RESCO roles to be in place, a village facilitator will be needed in each village to facilitate the whole process of RESCO establishment and building institutional capacity.

The context of this TOR is that UNDP, as the Delivery Agent, is seeking Company/Organization to deliver Community Development Service for 23 Renewable energy service company in Indonesia.

Expected Outputs Company/Organization

The key outputs to be delivered are:

1. Work plan, guidance, and reporting template are developed;
2. Village facilitators are trained and mobilized;
3. Local operators are recruited;
4. RESCO is established in each target village, which include recruitment of RESCO Boards, RESCO notarial deeds registration, and business plan for electrification business
5. Post-RESCO establishment facilitation and monitoring conducted.
