

Response to Vendor Question via E-mail

RFQ/05/2021 - Agricultural Drone

1. Is the seed dispenser a bolt on /bolt off unit?

It is a bolt off unit.

2. Is the fluid dispensing system a permanent unit?

The fluid dispensing system should not be permanent. It must be able to be detached from the drone, so we can install the seed Dispenser or the fluid dispensing system when needed.

3. The seed dispensing part of one of the drones and the other drone a fluid dispensing system , or is it all encompassing on both drones?

Both drones should have their fluid dispenser and their seed Dispenser. Modular units that facilitate the exchange.

We should be able to control one servo motor via one of the Transmitter switches, connected to one of the channels on the receiver (PWM).

4. I ask your clarification what documents should we attach to our offer regarding the “Company profile” and “Registration Certificate”?

The company profile is basically a CV of the company. It is a professional summary of the business and its activities.

The registration certificate is the document that is used in your country that proves that your company is a legal registered entity to conduct business.

5. Kindly advise on the maximum drone payload capacity preference, over and above the stipulated 5 kg minimum.

The maximum should be 10kg, with autonomy flight time of 15 minutes (endurance).
