Questions and Clarifications #1

RFPS-DAN-2021-503338: Development of Global Training Strategy and Programme for the Next Generation Stock Management Tool

Q#	Question	UNICEF Response
1	Is the SMT intended only for implementation at national and sub-national level or will it also go down to lower levels such as facility level?	At the moment, the SMT application allows for three supply chain levels (e.g. national, regional, district). In the next version, which will be available by end of the year, users will be able to customize and add additional levels as needed.
2	Will the findings of the training provider or other input from training provider have any ability to influence the software features or design of the next generation SMT? E.g. if there is something which comes up through the pilot will it be incorporated into possible software development changes or is the system fixed	Yes, the pilot will be used to gather inputs to inform future development of the platform.
3	Interoperability- will the next generation system be interoperable with other eLMIS systems (OpenLMIS, logistimo, mSupply) and DHIS2?	Interoperability with other systems is not a priority for the initial launch of the platform this year. However, UNICEF understands the importance of this and is planning to assess the feasibility in the future.
4	By this email message we would appreciate your answer is the RFPS-DAN-2021-503338 (Development of Global Training Strategy and Programme for the Next Generation Stock Management Tool) under open public procedure or under special invitation to tender Proposers, which list of Proposers was established by UNICEF - BID SECTION?	This is a competitive bidding and Supply Division DO NOT disclose the list of invitees/proposers.
