

The EU for Climate Project is funded by the European Union and implemented by the United Nations Development Program. The project supports Eastern Partnership (EaP) countries in implementing the Paris Agreement on climate and improving climate policy and legislation. Its goal is to limit the impact of climate change on the lives of citizens and make them more resilient to such change, which will help EaP countries integrate emission reduction and climate resilience goals into development policies and plans, and improve climate change policies and legislation.

CONTENT

List of abbreviations (example, adapt according to report).....	6
1 Report with assessment of vulnerabilities and weather-climate risks, and possible measures for reactive and proactive adaptation in the waste management sector	8
1.1 Assessment of the impact of the current state of the climate system on the waste management and wastewater treatment	8
1.2 Exposure and vulnerability assessment of the waste management and wastewater treatment	8
1.3 Quantitative risk assessment considering social and economic factors.....	8
1.4 Projection of risks and harm to the economy in view of the sectoral and territorial specificity	8
1.5 Assessment of adaptation capacity including identification of the list of adaptation scenarios (options), associated key measures and available resources, as well as the limitations (boundaries) of the adaptation capacity	8
1.6 Social-environmental analysis of the economic impact and capacity of adaptation measures in the waste management sector and wastewater treatment.....	8
1.7 Assessment of the effectiveness of the considered adaptation measures at various levels of decision-making (e.g., the measures of reducing vulnerability of the sites and territories that are the most exposed to dangerous climatic impacts are especially effective at the local and regional levels)	8
1.8 Development of adaptation scenarios for the waste management sector and wastewater treatment	8
1.9 Assessment of the social-economic effectiveness (the ratios of costs, risks (losses) and benefits) resulting from implementation of the suggested adaptation scenarios, and prioritization of the scenarios to choose the best scenario to meet this social-economic effectiveness criterion	8
1.10 Analysis of barriers and opportunities for legislative support of adaptation measures for the waste management sector and wastewater treatment.....	8
1.11 Analysis of barriers and opportunities for financing adaptation measures for the waste management sector and wastewater treatment	8
2 Report with analysis of interagency awareness of climate change in the waste management	9
2.1 Analysis of administrative, legal, market and other non-economic obstacles to efficient implementation of the measures to raise climate change interagency awareness in the waste management sector and wastewater treatment in Belarus and the awareness of the need to improve the legislative framework to overcome the obstacles and eliminate inconsistencies	9
2.2 Analysis of the legislative / institutional / coordination frameworks and the monitoring systems in the waste management sector and wastewater treatment.....	9
2.3 Development of recommendations to raise climate change interagency awareness in the waste management sector and wastewater treatment.....	9
2.4 Assessment of the readiness to develop and implement the climate change adaptation and mitigation measures in the waste management and wastewater treatment.....	9
2.5 Development of legislative and technical actions to implement measures on mainstreaming climate change in the waste management sector and wastewater treatment	9

2.6 A policy note in a common (non-technical language) with a summary of research findings for all Stages, to be published by mass media 9

Introduction

- 1 Report with assessment of vulnerabilities and weather-climate risks, and possible measures for reactive and proactive adaptation in the waste management sector
 - 1.1 Assessment of the impact of the current state of the climate system on the waste management and wastewater treatment
 - 1.2 Exposure and vulnerability assessment of the waste management and wastewater treatment
 - 1.3 Quantitative risk assessment considering social and economic factors
 - 1.4 Projection of risks and harm to the economy in view of the sectoral and territorial specificity
 - 1.5 Assessment of adaptation capacity including identification of the list of adaptation scenarios (options), associated key measures and available resources, as well as the limitations (boundaries) of the adaptation capacity
 - 1.6 Social-environmental analysis of the economic impact and capacity of adaptation measures in the waste management sector and wastewater treatment
 - 1.7 Assessment of the effectiveness of the considered adaptation measures at various levels of decision-making (e.g., the measures of reducing vulnerability of the sites and territories that are the most exposed to dangerous climatic impacts are especially effective at the local and regional levels)
 - 1.8 Development of adaptation scenarios for the waste management sector and wastewater treatment
 - 1.9 Assessment of the social-economic effectiveness (the ratios of costs, risks (losses) and benefits) resulting from implementation of the suggested adaptation scenarios, and prioritization of the scenarios to choose the best scenario to meet this social-economic effectiveness criterion
 - 1.10 Analysis of barriers and opportunities for legislative support of adaptation measures for the waste management sector and wastewater treatment
 - 1.11 Analysis of barriers and opportunities for financing adaptation measures for the waste management sector and wastewater treatment

2 Report with analysis of interagency awareness of climate change in the waste management

- 2.1 Analysis of administrative, legal, market and other non-economic obstacles to efficient implementation of the measures to raise climate change interagency awareness in the waste management sector and wastewater treatment in Belarus and the awareness of the need to improve the legislative framework to overcome the obstacles and eliminate inconsistencies
- 2.2 Analysis of the legislative / institutional / coordination frameworks and the monitoring systems in the waste management sector and wastewater treatment
- 2.3 Development of recommendations to raise climate change interagency awareness in the waste management sector and wastewater treatment
- 2.4 Assessment of the readiness to develop and implement the climate change adaptation and mitigation measures in the waste management and wastewater treatment
- 2.5 Development of legislative and technical actions to implement measures on mainstreaming climate change in the waste management sector and wastewater treatment
- 2.6 A policy note in a common (non-technical language) with a summary of research findings for all Stages, to be published by mass media
