Base line and end line study for the Rural and Remote Education Initiative for Papua provinces - Phase 3

Your offer, comprising of a Technical and Financial Proposal/s, in separate document, should be submitted by email to jakartasupply@unicef.org **NO LATER THAN Friday, 25 February 2022 @15:00 hours Jakarta Local Time**

Please find below some questions received from the bidders for the above-mentioned RFP/tender for your reference:

1	Q	Is there any related framework to the programme's monitoring and evaluation framework that can be shared to understand more about the mentioned key indicators?
	A	Yes, and it will be shared to selected vendor only, due to this is considered as internal document. Once a vendor is selected, we will refine the methodology to meet the framework we established.
2	Q	We also want to reconfirm, in the ToR mentioned that the analyses of base line and end line are in performed in the area level, should we also consider the sample to be representative for each school and each grade (Grade 2 and Grade 3) at school level within the treatment group?
	A	Yes, comparative analysis of baseline-end line will be by coverage area (District and sub district), school, and grades within the treatment group with qualitative triangulation as determinants/challenges to the baseline-end line findings
3	Q	As the base line and end line study cohort will be the same, is there any attrition rate to consider?
	A	It is always anticipated, students sampled in grade 2 during baseline will be in grade 3 during endline, and students sampled in grade 2 during endline were not attributed during baseline, but analyses is by grades / level of students, not individuals.
4	Q	Is it possible to have the number of students who were given treatment in each school in addition to the population table provided in the ToR?
	A	Schools are going to be selected before the baseline started, we are now in the stage of finalizing them. For the sake of developing sampling methodology and budget, please consider 20 schools per district as treatment group, and only sample of grade 2 and grade 3 students.
5	Q	Regards to the contract, in the ToR is stated that the timing/duration of the contract: The baseline and end-line study is to be conducted at two distinct intervals over 22 months from 1 March 2022 to 31 December 2023.

		We would like to clarify, if that implies that the contract for the selected organization will be 22 months or it would follow the assigned project timeline, there would be two periods of contract: for baseline Mar-May 2022 and end-line study October-December 2023.
	A	There will only be one contract (22 months) with two periods of assignments. The first period is the baseline, that will need to be finalized between March-May 2022. The second one is the endline, to be finalized between October-December 2023. Between June 2022-September 2023 there will not be any deliverables expected from the institution.

Date: 23 February 2022
