Questions and Clarifications #2

RFPS-DAN-2022-503428: *Implementation of the SCM Professionalisation Framework in Nigeria*

Q#	Question	UNICEF Response
1	Are there indications of the sample size of stakeholders to be analyzed as mentioned in the RFP? This is useful for the efforts estimation and consequently our fees.	The sample size will be determined as part of the stakeholder analysis which is the first activity listed in the ToR. If it's helpful, the stakeholders would focus on local institutions, including academic institutions, vocational schools, as well as the USAID mission and the UNICEF country office. Not all donors or implementing partners working in supply chains will be relevant for this stakeholder analysis.
2	The scope of work includes workshops facilitation. Can we safely assume that the administration and logistics costs for the workshops should be part of our commercial proposal?.	Yes
3	The project office location was not mentioned in the RFP. Kindly provide.	People that Deliver is based in Copenhagen, Denmark.
4	As was stated in the objective of this exercise it to' implement the first phase (advocacy & defining the scope) necessary to complete a supply chain improvement in Nigeria -some of this assignments's deliverables include, a validation workshop,a project charter & an implementation plan for Nigeria. We have been unduly bewildered regarding the foregoing for the following reasons: -Adamawa, Bauchi & Kebbi which were selected as the study sites do not constitute the main Nigeria's Supply Chain Centres in comparison with the Oshodi Lagos Central Stores, or the other Zonal Stores. With reference to the 'Ajulo, Vincent, Fatiya, Asherin,et al 2015, Nigeria National Supply Chain Assessment Results,A Review of the Public Health Supply Chain for Nigeria, Arlington, Va: Supply Chain Management System & the USAID /Deliver Project Task Orders 4 &7, only Bauchi featured marginally in that Report. From the foregoing, could you please provide us with the specific guidelines that would enable us to situate this assignment more clearly?	<ul style="list-style-type: none"> Just one validation workshop will be done and the service provider should identify the best location for greatest reach/impact For the question on Adamawa, Bauchi, and Kebbi, we used that as a benchmark but these states do not need to be prioritized For the question on the A Review of the Public Health Supply Chain for Nigeria, again this was not referenced in the terms of reference and it is not related to this activity The approach should follow the methodology outlined in the the PtD Supply Chain Management (SCM) Professionalisation Framework which is described in section 1 of the ToR.
