#### I. Site Visit Agenda:

- 1- Provide a brief overview of the Project, Scope of Work, required materials, and Timeline.
- 2- Site inspection and assessment.
- 3- Review of Documentation including the BoQ and Technical Drawings.
- 4- Responding to the queries from the participating companies/suppliers/contractors/firms etc.

## **I. Site Visit Summary:**

The suppliers were provided an opportunity to conduct an inspection and assessment of the Qushtapa Camp. During this inspection, all technical aspects of the project were explained by UNHCR Technical team to provide bidders with a comprehensive understanding of the project's Scope of Work. The provided information will assist the bidders in assessing and considering the affected factors when pricing their bids.

After the project briefing, a significant number of inquiries were raised by the bidders, which were thoroughly addressed by UNHCR Engineer.

The following clarifications were requested and responded during the Q&A session.

## **II. Questions and Answers:**

**Q1:** Does UNHCR accept joint venture modality?

**A:** The companies should submit a legal JV contract endorsed by the government with a statement outlining the duties and responsibilities of each party otherwise, the joint venture will not be accepted.

**Q2:** Could you please explain why there is a mismatch between the number of poles and streetlights??

**A:** 190 solar lights will be installed on 95 poles (one pole with double lights) and the contractor is responsible to provide the arc to fix double lights on one pole. The installation of each of the remaining lights will be done onto a single pole. However, the final decision regarding this arrangement will be made in consultation with the UNHCR Technical team during the delivery and installation process.
