

RFQ 623965-2-RO-Provision of Thermal vision camera for Ukraine – No.2

Clarifications for bidders

	CLARIFICATION REQUEST	ANSWER
1	The Axis Q8752-E camera is produced in two modifications, with a frequency of 8 frames per second and 30 frames per second for the thermal imaging module. What parameter does the end-user need for this camera?	We need the Axis Q8752-E camera with a frequency of 30fps for the thermal imaging module.
2	If a 30fps camera modification is needed, an end user certificate must be completed and an export license must be obtained to supply it. Does the end user agree to sign such a document?	The end user agreed to sign the end-user's certification. (can you please submit the respective form template with your offer if possible)
3	Camera production time is 8-9 weeks, the period for obtaining an export license is up to 3 months. Would a delivery time of 5-6 months be acceptable for a 30fps camera?	We accept that FCA supplier's warehouse delivery time shall not exceed three (3) months (confirm FCA delivery time). Please kindly see 2.4.1. Qualification requirements in special instruction to bidders.
