

RFQ 629293-REM-Provision of specialized vehicles for Ukraine– No.4

Clarifications for bidders

	CLARIFICATION REQUEST	ANSWER
1	The Vehicle shall provide sufficient power autonomy for operating the physical protection systems during the loading and unloading operations for up to twelve (12) hours for the second vehicle." What is the maximum power consumption of the physical protection systems during loading and unloading operations? What are the expected frequency and duration of loading and unloading operations?	It is recommended that the Physical Protection System installed on the vehicle has an independent rechargeable source of electricity supply. (accumulators). It will be possible to know the maximum power that the physical protection system needs to operate within normal parameters after we have the list and model of the equipment that composes it
2	The tracking system shall include secure SDK and documentation files with secure API to be interfaced with the Transport Control Center of IZOTOP and SNRIU." What specific SDK and documentation files will be included? Will IZOTOP provide some special software to be installed?	We don't have any specific SDK. This is separate discussion with IZOTOP about the interface software with the transport control centre.
