

## RFQ 2406-24

### Clarification No.1

Date: 05 March 2024

Question1	Does FMS have Lenovo Storage installed as they ask for an expansion box. Is it a DE2000H?
Answer	Yes. FMS has existing DE200H installed thus the request for expansion.
Question2	The 25TB in the current setup is missing around 75TB to meet the 100TB.
Answer	Yes.
Question3	Is that mean it needs to config for 75TB in expansion Boxes?
Answer	Yes, we need to configure. Lenovo Engineers need to be involved as the HPC as initially configured by them.
Question4	What kind of RAID do you need?
Answer	RAID 6
Question5	Where does the 50TB fit in?
	The expected output should have been 100 TB rather than 50 TB (Typo from our side)
Question6	How many VX nodes do you need?
Answer	Two VX Node (1 Prod, 1 Redundant)
Question7	There is no quantity in the RFQ. To reach 100TB at least 2 to 4 systems are needed. Could you clarify the number of systems needed? Or is this not relevant and you just need to reach 100TB? Not relevant just need to reach 1000TB usable storage
Answer	QTY 2 for Web Server, For SAN Expansion systems may vary depending on the sizes of disks supplied but in the end we need to reach 100TB usable storage
