Question	Answer
What is the process for matching the countries with implementing agencies?	The interested countries will be matched with the implementing partners by ICAT, this is done based on what we consider to be the best match in terms of factors such as language skills of the IP, and other country-specific requirements
Should the applicant specify the countries they are interested in?	The applicant is welcome to provide preferences for countries which they think can be a good match in terms of regional knowledge, language requirements, and other factors. The ultimate decision of countries allocated will be influenced by interest and need identified in the partner country. Please also refer to the CfP Section 1.4. "*Organizations may also limit their proposal to the region(s) they have special expertise in (including specific language skills, e.g. French, Spanish, Portuguese, Russian, Chinese).* *To identify the suitable implementing entity, the applicant shall specify:* - *Region and language of support; and* - *Number of projects the applicant has the capacity to implement till the end of 2025.*"
Are there any specific skills required among team members?	Please refer to table 2.1.3 on page 14 of the CfP, where the evaluation criteria for the key personnel proposed are stated. The proposal and CVs should clearly show the team members' capabilities related to the scope and activities under the CfP, and their specific experience in areas related to climate finance transparency
Do you have any particular format or template for the report or reference, which each applicant must submit at least two?	There is no specific template or format. This can be either an end-of-project report for a project where the applicant was involved in a major capacity, a reference letter from a previous project, stating the scope, duration and, if possible, budget of the activity, or a similar document clearly showing the duration and scope of the project undertaken, as well as the applicants' involvement.
